

# Test project description

Project installation instruction:

- Run composer:install
- Create database
- Rename .env.example to .env and edit connection with database
- Run php artisan migrate
- Start server `php -S 172.0.0.1:8000 -t public`

Available custom commands:

- Php artisan population:get
  - o `population:get --limit=100` <- default value
- php artisan population:clear
  - o `population:clear --directory=/storage/app` <- default value

Available url and requestes:

- <http://172.0.0.1/>
  - o `/api/cities` GET
  - o `/api/city/{id}` GET
  - o `/api/city/recorded/{id}` GET
  - o `/api/city/{id}` DELETE

For custom http requestes I avoided using direct cURL in php, instead I've used the library called Guzzle, specifcly builded for http and https requests.

All bonus tasks also has been done, only in Lumen.
